=============== With PCKeeper Cracked Version, you can quickly and easily keep your computer running at its best, protect it from common problems and keep your data safe. PCKeeper consists of 5 main modules: System Information, Drive Management, Security, Internet and Personal Care. In the System Information section, you can check the following details: Operating system version, operating system build number, hardware information, hardware drivers and online and installed software. The information is displayed in a tabbed interface with searchable columns. In Drive Management, you will find details about the current state of your hard drives and partitions. Whether they are mounted or not, you can view detailed information like file system, creation date and owner. In Security, you can protect your computer from viruses, malware and other security threats. You can scan your computer for errors, remove hard drive errors, clean out junk files and defragment your hard drive. In the Internet section, you will find a list of installed applications, the Windows update history, online and installed software, the current connections and what programs are currently running. In addition, you can manage your internet history, security settings and access points. In the Personal Care section, you can organize your settings in a better way and view detailed information

about the current privacy settings. You can enable 'require administrator' for certain programs or set up the System Restore and the Windows Backup. In PCKeeper, you can check your computer status in no time at all, detect errors and manage your data in a safe way. System Requirements For PCKeeper:

The following are minimum system requirements for the game. However, we have seen it run with as little as 1GB of RAM. The higher you go the more it requires. OS: 64-bit Windows 7 or later (32-bit Windows can run but with the lowest graphics settings) Processor: 2 GHz dual core or equivalent RAM: 2 GB (4 GB recommended) GPU: GeForce GTX 660 or better For most systems above this requirements are met, but we have seen people on high end systems with the highest graphics settings
